Conflict Minerals Compliance Statement

MPS Industries is aware of the Frank-Dodd Act, which deems certain minerals as Conflict Minerals. As a manufacturer of electronic components, MPS uses a variety of metals in our products. Some of those metals – Tin (Sn), Gold (Au), Tungsten (W) and Tantalum (Ta) – could possibly be derived from Conflict Minerals.

MPS Industries uses reasonable due diligence in our supply chain to ensure that the metals used in our products are not sourced from smelters associated with the Conflict Region as described in the Frank-Dodd Act. MPS works closely with our supply chain partners to ensure that Conflict Minerals are not used.

We certify that, to the best of our knowledge, we are in compliance with the Frank-Dodd Act.

For questions regarding MPS Conflict Minerals compliance, please contact your local MPS representative. For technical questions, please contact our Engineering Department at our corporate headquarters.
